

VGamepad Body Tracker Beta

By PJSoftCo

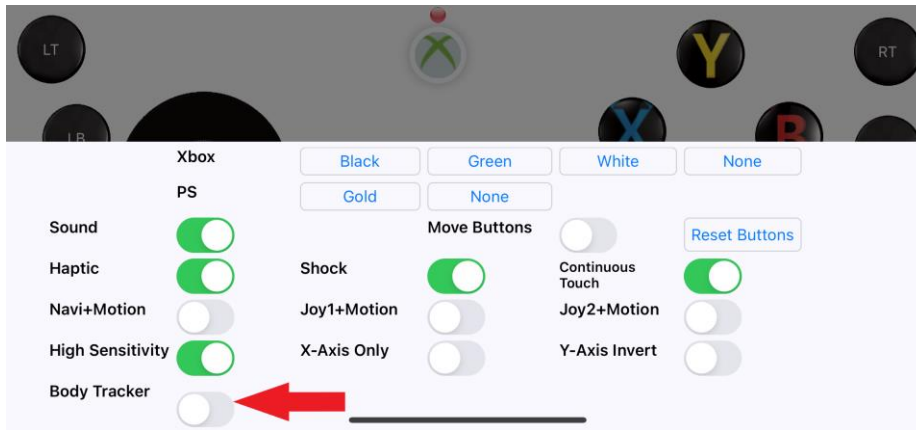

Instructions and guide

Please follow these rules for the best experience

- This feature is only available on iPhone XS & later models. Android does not support this feature.
- Find an open area and get ready for some physical activities. Something like this is good!

- Go to settings and turn on the Body Tracker.

Ready to track:

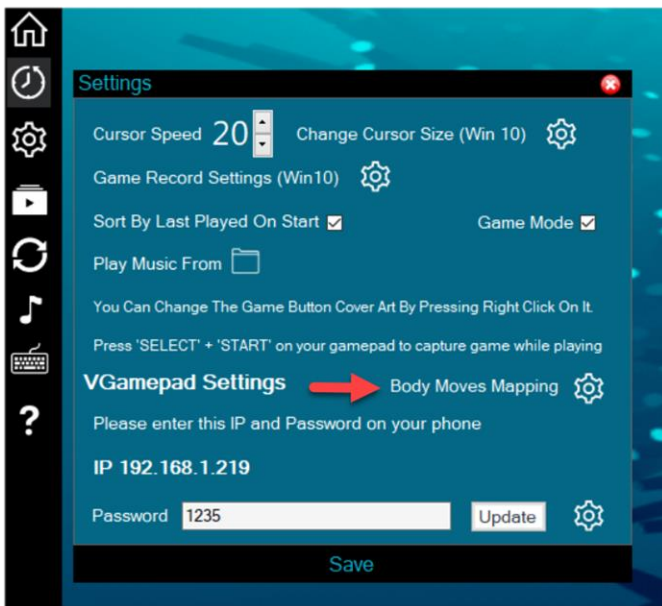

Not tracking:

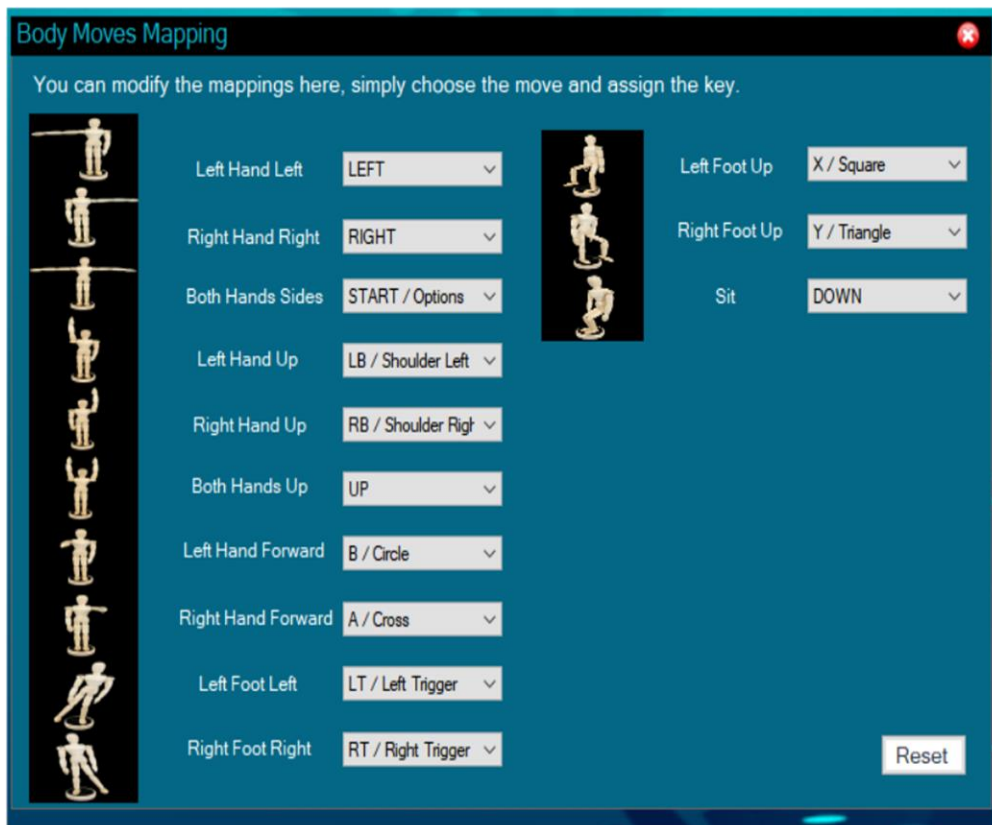

- Place your phone on the TV stand (for example) in front of you and let the **rear camera** see your body thoroughly, **try to stay 6 Feet (2 Meters) apart**.

- Now you can make moves and see the mapped buttons triggered. List of detected moves on the next page.
- On the server-side app, go to Settings > Body Moves Mapping, you can modify the mappings there.

PCGameConsole

Green gear shows Body Moves Mapping in VGamepad-Server
